Wireless network setup
(For Windows 10 operating systems)

The following description assumes that you are using a Windows 10-based computer to access the wireless network.

Start the Control Panel and then click on the Network and Internet page and then on Network and Sharing Centre page. This interface will appear:

![Control Panel interface](image)

Click on “Set up a new connection or network” text.
Then choose “Manually connect to a wireless network” option and click on “Next”.

![Set Up a Connection or Network](image)
A pop up window will appear where you will need to set the network name.

Enter information for the wireless network that you want to add

Network name:  

Security type:  [Choose an option]  

Encryption type:  

Security Key:  [Hide characters]  

☐ Start this connection automatically

☐ Connect even if the network is not broadcasting

Warning: If you select this option, your computer's privacy might be at risk.
The name of the required network can be checked in the bottom right corner with clicking onto Wi-Fi icon and then enter it into “Network name” field.
Set the Security type to “WPA2-Enterprise” option and then click on “Next” button.
When “Adding is finished” text appears click on “Change of connection settings” option.
Click on “Security” page and then on “Settings“ option in the new window.
The first two check box need to be checked, then enter “noc.elte.hu” as a server and choose “DigiCert Assured ID Root CA” as the validation service provider. Confirm all windows with “OK” and you can already use ELTE Wi-Fi service again. It is possible that the Windows will ask your username and password once again, in this case enter these information.
